
a
Mouse, linear VR track
zone moved
within session
Reward zone 1
Reward zone 2
Model, open arena
reward
relocated
same trajectory
replayed
Reward at A
Reward at B
b
Field displacement
Model (21395 cells, 52 networks)
Mice (1511 cells, 7 sessions)
Cells (%)
stayed
moved with reward
Field displacement / reward displacement
c
Cell classes after relocation
Model, fixed trajectory (n = 52)
Model, goal-directed trajectories
Mice (n = 7 sessions)
Cells (%)
mice vs fixed-traj.
P = 0.69
mice vs fixed-traj.
P = 0.94
Reward-relative
Place-anchored
d
Model (n = 52)
First learning (A)
After relocation (B)
Success rate
Episodes since reward onset
Mice (n = 7 sessions)
Lick preference, new zone
3.3 trials
Trials since reward switch
