
a
Licking, m11 session 5
Trial
Position (cm)
switch
Lick rate (Hz)
11
0
b
Fields across the switch (n = 209)
Other
Place-anchored
Reward-relative
Field peak after switch (cm)
Field peak before switch (cm)
c
Classifier dependence (n = 7)
Reward-relative cells (%)
model 6.2 ± 0.4%
Distance and shuffle criteria
Distance only
d
Each session
Lick preference
Map fraction (rel. pre-switch)
Trials since switch
e
Latency per session
Map latency (trials)
licking earlier in 5/6
P = 0.062
below detection floor
Lick latency (trials)
f
Occupancy control (n = 7)
paired P = 0.94
Peak shift toward new zone
Raw
Occupancy-matched
