RNN remapping ≈ SR occupancy prediction (20 seeds, γ=0.99, Skaggs≥0.3, T_pol & post-RL field-centers from goal-conditioned probe)
Remapping consistent with SR
(n=20 seeds, pre→goal-cond.)
Mean shift toward reward
(positive = toward; pre→goal-cond. phase)
p=0.048
p=0.070
SR
(occupancy)
No-head
model
