
Entropy-gate sensitivity
Fig. 5b stat vs entropy threshold
Double-dissociation p (head vs no-head, paired)
p=0.05
used (5.5)
MIN_ENTROPY threshold
Relocation clean count vs threshold (of 45 total)
clean relocation seeds
used (5.5)
MIN_ENTROPY threshold

Skaggs-threshold sensitivity
p: 0.005 0.005 0.002 0.001
Mean Δd frozen replay (positive = toward reward)
no-head
head ON
used (0.3)
Skaggs threshold

SR direction test (A→B contrast, 40 seed-conditions)
Actual vs SR-predicted shift angle
(mean R=0.70, n=17204 cells)
Residual vs distance
r=+0.07, p=3.0e-22
Residual shift magnitude (orthogonal to SR prediction)
Distance to reward (Phase A)

Correlation stability vs n
(full pool: 32 clean seeds)
Fig 5c (behavior vs %B)
Fig 5d (ΔA vs ΔB)
Spearman ρ (median, IQR band)
relocation seeds (n, resampled)
